

10 little tasters

10 little children,
just like yours and mine ...
One took some medicine,
and then there were nine.

Medicines can kill.
Keep them away from
curious children's
hands.

9 little children,
near the garden gate ...
One sprayed like Daddy,
and then there were eight.

Insecticides and
garden chemicals
are deadly. Store
them safely.

8 little children,
hungry at eleven ...
One spied a snack,
and then there were seven.

Children should be taught to avoid eating wild berries and fruits.

7 little children,
cleaning house for kicks ...
One tasted polish,
and then there were six.

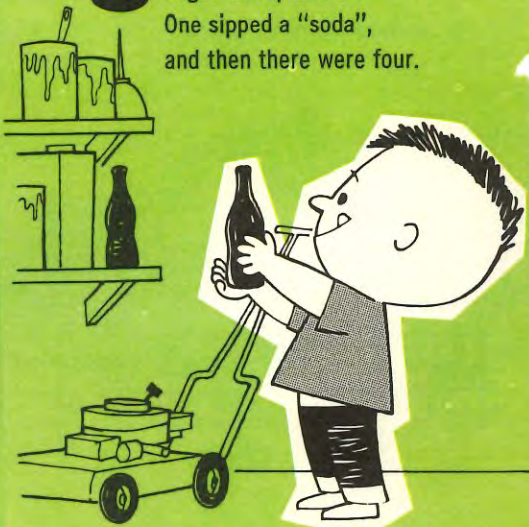

Low cabinets within children's easy reach should be used for storing food, not dangerous household products.

6 little children,
laughingly alive ...
One went for glamour,
and then there were five.

Cosmetics can cause
serious illness, so
keep them away from
children.

5 little children,
eager to explore ...
One sipped a "soda",
and then there were four.

Keep all substances, particularly petroleum products, in original containers.

4 little children,
in festive glee ...
One found some "candy",
and then there were three.

Aspirin, often flavored, may be dangerous. Children should be told they're getting medicine, not "candy".

3 little children,
seeking things to do ...
One nibbled paint chips,
and then there were two.

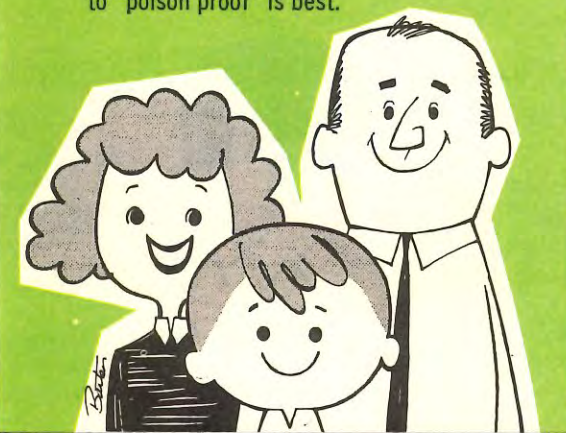

Scrape off old flaking paint. Repaint with lead-free types.

2 little children,
washday work was fun ...
One "helped" her Mommy,
and then there was one.

Bleaches, lye and laundry room products can be lethal in little hands. Keep them away from children.

1 little child,
alive and full of zest ...
For he has learned, with parents' help,
to "poison proof" is best.

Thoughtful parents protect their children through proper precautions and careful instruction.
